Mo'men Sarsour

Computer Systems Engineer

I have finished three programming courses, JAVA & C++ & Full stack like front-end and PHP-laravel. I love programming a lot and I always strive to develop myself and my skills in building programs and applications. I always aspire to learn a lot about these programming languages and create programs and websites using these languages.

Experience

2021 - 2024
Centroware company
Computer systems engineering "Full Stac"
Creating and designing web pages and websites and transforming simple ideas into professional ideas and introducing them to the digital world and facilitating access to them and making them an entity and easy to access online. Among the projects that I designed and developed:-
1. Creating multiple stores within one store so that each store is controlled by an admin specific to this store and specific to its categories and products and controlling it completely. This admin will have a percentage of profit for the main admin, the store owner, and with the service of delivering orders according to the regions and taking the service account to the delivery directly and electronic payment was activated through payment gateways
2. Creating an online store so that various products are displayed under known categories and activating the payment gateway through it so that the store is controlled by an admin and buyers.

2020 - 2023
Maximus Foundation Al-Hofuf
Data Management and Entry
Served as a Data Manager, where I effectively managed and entered data for the foundation's clients and beneficiaries. My responsibilities included collecting and inputting data into the foundation's official system, creating professional CVs for beneficiaries, and resolving any challenges they faced. Additionally, I played a key role in analyzing, classifying, and organizing beneficiary data based on specific cases, ensuring accurate data management and optimized processes to beneficiaries.
